Work Experience

Senior Software Developer, Team Lead   VueJS, Flutter & Angular

Snappy Innovations   **May 2020 - Ongoing**

This role includes creating new or maintaining over a dozen restaurant CRM apps. These include making online orders, earning and redeeming punch cards and coupons, and the purchasing of store credits and gift cards. I have taken a leadership role in creating the POS application using Flutter as well as several sibling applications that work in cooperation with one another in order to build the best user experience possible. An important aspect of this role has been writing clear, detailed documentation and automated test cases in order to provide reliable and maintainable code. My role has grown to include managing and mentoring junior developers.

Software Developer   VueJS & Firebase

YoReferee - Consultant   **August 2021 - December 2022**

I have taken on a contract in order to expand on their web applications, build apps new apps from scratch and resolve a wide range of bugs. While I have primarily focused on frontend using VueJS, this has also given me a chance to explore Firebase.

Full Stack Software Developer   VueJS & Laravel

Nobal Technologies - Full-Time + Consultant   **April 2019 - January 2022**

As a Full Stack Web developer, I have taken on the responsibility of the complete rebuild and redesign of Nobal's CMS (Content Management System) in order to provide both developers and clients with the most seamless experience when maintaining Nobal's iMirror. This grew to require the addition of many new features, either from scratch or integrating with third party software. I have continued working with Nobal as a part time consultant in order to build multiple mobile directed web applications in VueJS.
